

# **FACTORS AFFECTING POSTHARVEST QUALITY OF HORTICULTURAL PRODUCE**

1

**Prof.Dr. Mustafa Erkan**  
**Akdeniz University**  
**Department of Horticulture**  
**07059 Antalya, Turkey**  
**E-mail: [erkan@akdeniz.edu.tr](mailto:erkan@akdeniz.edu.tr)**

# Outline of the presentation

- **Definition of quality**
- **Maintaining quality**
- **Factors affecting postharvest quality**
- **Factors affecting quality during storage**
- **Storage types**
- **Advantages of CA storage**

**POWERTY AND  
FOOD SUPPLY**

**OVER  
PRODUCTION  
AND MARKET  
COMPETITON**

**PRODUCTION**

**CONSUMER PREFERENCE  
PRODUCE DIVERSITY  
FOOD SAFETY  
QUALITY**

# **What consumers tell us**

- **Appeal to my senses and I will buy your produce**
  - **Taste is the most important factor**
  - **Price less an issue IF you consistently deliver on great taste**

Market Competition

# Market Competition

## **Fresh-cut products vs. Intact products**

# Introduction new tomato types

# Introduction new cultivars

# Fruits having more antioxidant

# Product quality

**To provide high quality fruits and vegetables throughout the year, it is required to start from high quality materials at harvest.**

**Product quality is only maintained after harvest.  
Not improved.....**

**Pre-harvest and post-harvest factors maximize or minimize the quality of the fresh fruit and vegetables.**

**Quality is the most  
important factor  
for marketing and export**

# CONSUMERS' DECISIONS TO BUY

**External  
Appearance**

**BUY**

**Aroma**

**Manual  
Texture**

# EXTERNAL QUALITY

# External color/quality relation

# INTERNAL QUALITY

# CONSUMERS' DECISIONS TO BUY **THE SECOND TIME**

**Flavor**  
and  
**Aroma**

**Overall  
Appearance**

**BUY**

**Oral  
Texture**

# Quality

## External Quality

**Size and shape**  
**Skin color**  
**Physiological disorders**

## Internal Quality

**Taste and aroma**

## Use of CA technology during transportation

# Pallet Covers for Carbon Dioxide Treatment of Strawberries during Transport

# USE OF MAP DURING TRANSPORTATION AND STORAGE FOR POMEGRANATES

# **USE OF MAP DURING TRANSPORTATION AND STORAGE FOR CHERRIES**

**Marketing quality**

**Fruits and vegetables are an important source of carbohydrates, proteins, organic acids, vitamins and minerals for human nutrition.**

**However, fruits and vegetables are highly perishable products particularly once they have been harvested.**

**Grower**

**POSTHARVEST  
LOSSES : 10-50%**

**Harvest Transportation Storage Packaging Marketing**

**Main  
Loss**

**Consumer**

# POSTHARVEST LOSSES

- **Quantity** (Water loss, decay, physiological disorders,
- **Quality** (texture, firmness, vitamins)

# PARASITIC DISEASES

A PARASITE IS A LIVING ORGANISM WHICH OBTAINS FOOD AT THE EXPENSE OF ANOTHER LIVING ORGANISM (HOST)

CAUSED BY BACTERIA

CAUSED BY FUNGI

# Primary factors of postharvest losses

- Poor pre-harvest techniques
- Improper handling
- Inadequate marketing system
- Inadequate transportation facilities
- Lack of information

# **Importance of maturity and storage**

- To obtain maximum sensory and nutritional quality fruit for customer perception,**
- To obtain prolonged storage and shelf life capacity,**
- To facilitate scheduling of harvest window and packing house operations,**
- To manage shipping and marketing.**

Quantity

CHERRY EXPORT (90%) : 10 days

CHERRY HARVEST : 60 DAYS

# Determination of Harvest Maturity

**Cell  
Expansion**

**Cucumber,  
squash**

**Horticultural  
Maturity**

**Apple,  
Banana**

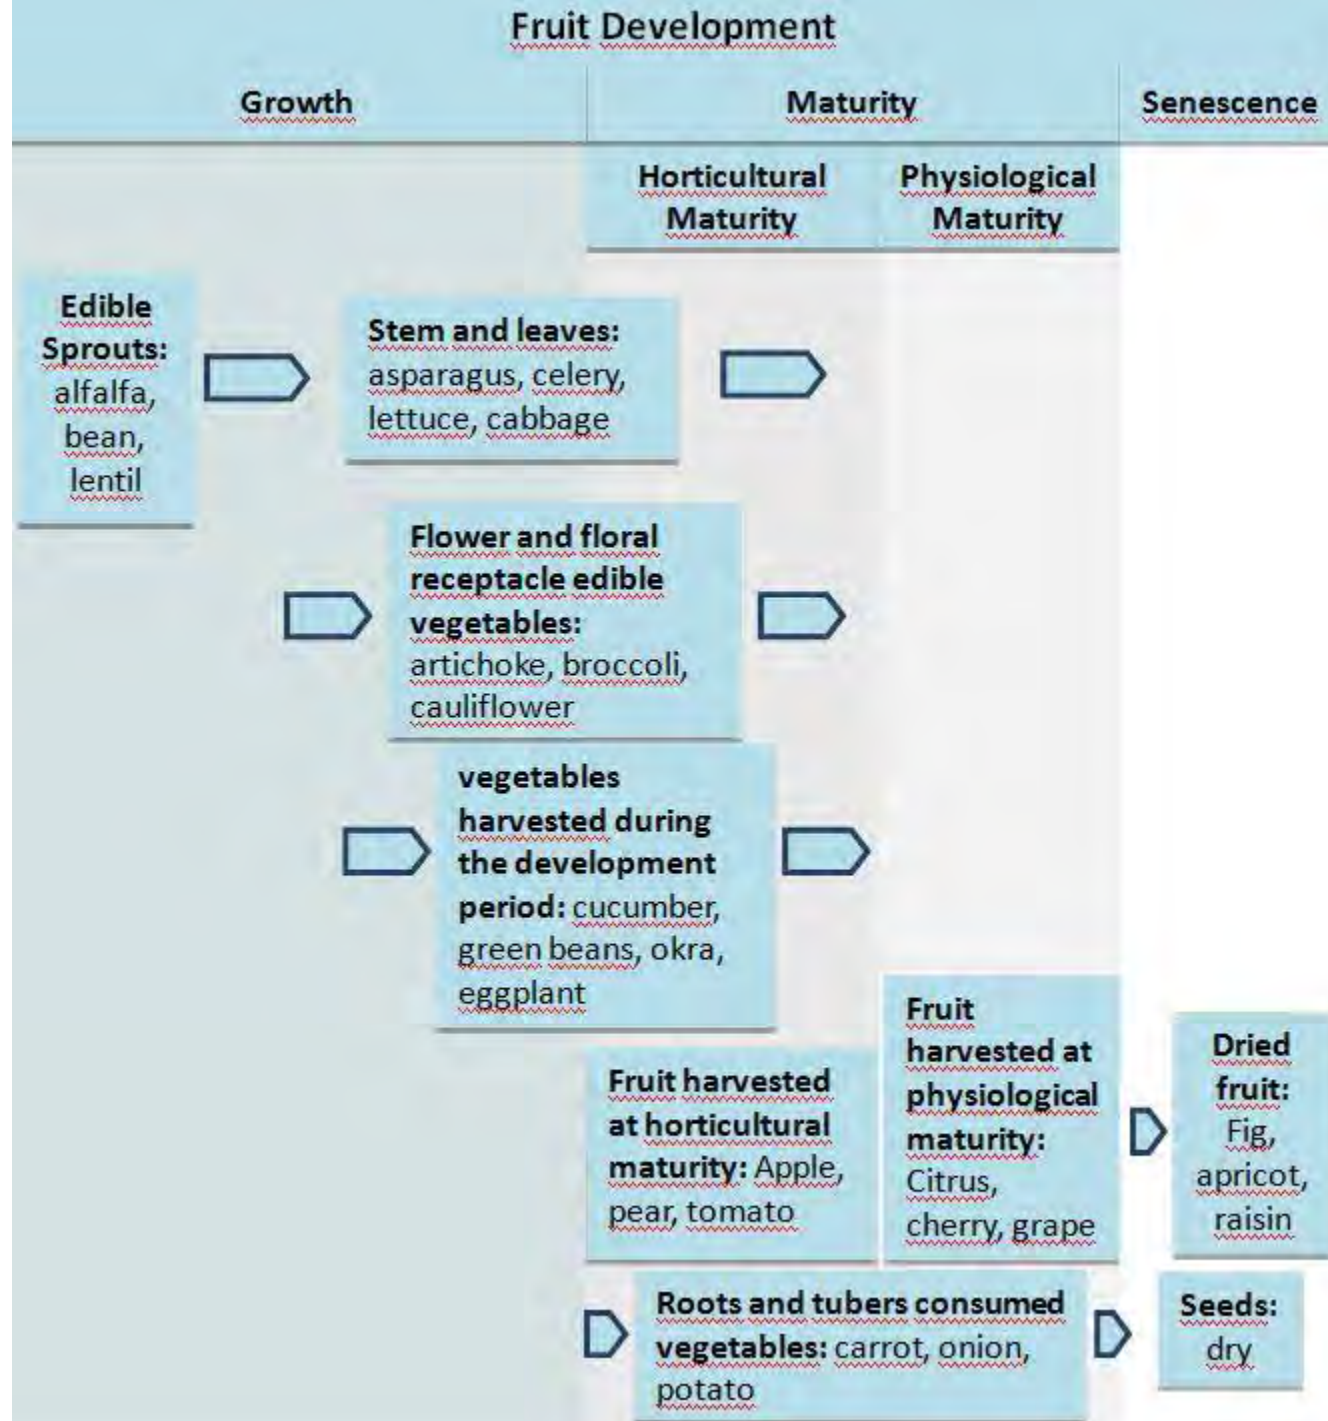

**Commercial  
Maturity**

**Cherry,  
Pomegranate**

# Harvesting and Postharvest handling Systems for various Commodity Groups

## Maturity indices:

- size and shape
- Skin and flesh color
- Starch index
- Firmness
- Soluble solids
- Titratable acidity
- Respiration rate
- Ethylene production

# **Disadvantages of early harvest**

- **Early harvested fruits and vegetables have not reached their final size, shape and weight due to uncompleted fruit development that results in low yield,**
- **In early harvested fruits, carbohydrates and primarily sugar accumulation, loss of acid and astringent substances, cell wall degradation and the formation of aroma substances are not enough.**
- **Fruits harvested early cannot develop the desired skin color.**
- **Cuticular and lenticular development is not completed in early harvested fruits, so weight losses due to water loss is high and these fruits wrinkles quickly,**
- **Early harvested fruits are prone to some physiological disorders such as superficial scald.**

# **Disadvantages of late harvest**

- **The storage duration of late harvested fruit is relatively shorter than those of optimal harvested crops,**
- **These fruits are prone to fungal decay since they are over-matured,**
- **The fruit taste is inferior due to the reduction in acidity,**
- **They are susceptible to some physiological disorders such as senescence breakdown, internal browning, Jonathan spot etc.,**
- **Late harvest increases pre-harvest fruit drop and ends up with a reduced marketable yield.**

# PRE-HARVEST DROP IN APPLES

# The main maturity indices in EU and the USA for Citrus\*

<b>Citrus Types</b>	<b>TSS (%)</b>	<b>TA (%)</b>	<b>TSS/TA ratio</b>	<b>Juice (%)</b>
<b>Oranges</b>	<b>8</b>	<b>0.4-0.7</b>	<b>8-10</b>	<b>&gt;33</b>
<b>Navel oranges</b>			<b>8-8.5</b>	<b>&gt;33</b>

# The main objectives of applying postharvest technology to harvested fruits and vegetables are

- to maintain quality
- to protect food safety
- to reduces fungal and physiological losses between harvest and consumption.

# STORAGE SUCCESS DEPENDS ON

- **Species,**
- **Cultivars,**
- **O<sub>2</sub> and CO<sub>2</sub> levels in the storage room,**
- **Storage temperature,**
- **Stage of maturity of produce at harvest,**
- **Growing conditions before harvest,**
- **Presence of ethylene in the storage room**
- **Use of ethylene antagonist  
(1-MCP and etc.)**

# Storage parameters AFFECTING fruit QUALITY

# THERE IS A BEST ATMOSPHERE FOR MOST THINGS

NORMAL ATMOSPHERE  
BEST FOR HUMANS

BETTER ATMOSPHERE\* FOR  
PRESERVING FRESH FOODS

# **CONTROLLED ATMOSPHERE STORAGE**

# Controlled Atmosphere (CA) Storage

- CA is a system for storing F&V in an atmosphere that differs from normal atmosphere.
- Reducing  $O_2$  ↓
- Increasing  $CO_2$  ↑
- Removing ethylene and other volatiles
- The three main gases in CA:  $CO_2$ ,  $O_2$  and  $N_2$ .

# Composition of Storage Atmosphere

## Cold Storage (Normal Air)

## CA Storage (Desired Atmosphere)

**Desired  
Atmosphere**

%CO <sub>2</sub>	: 4
%O <sub>2</sub>	: 2
%CO <sub>2</sub> +O <sub>2</sub>	: 6
%N <sub>2</sub>	: 94

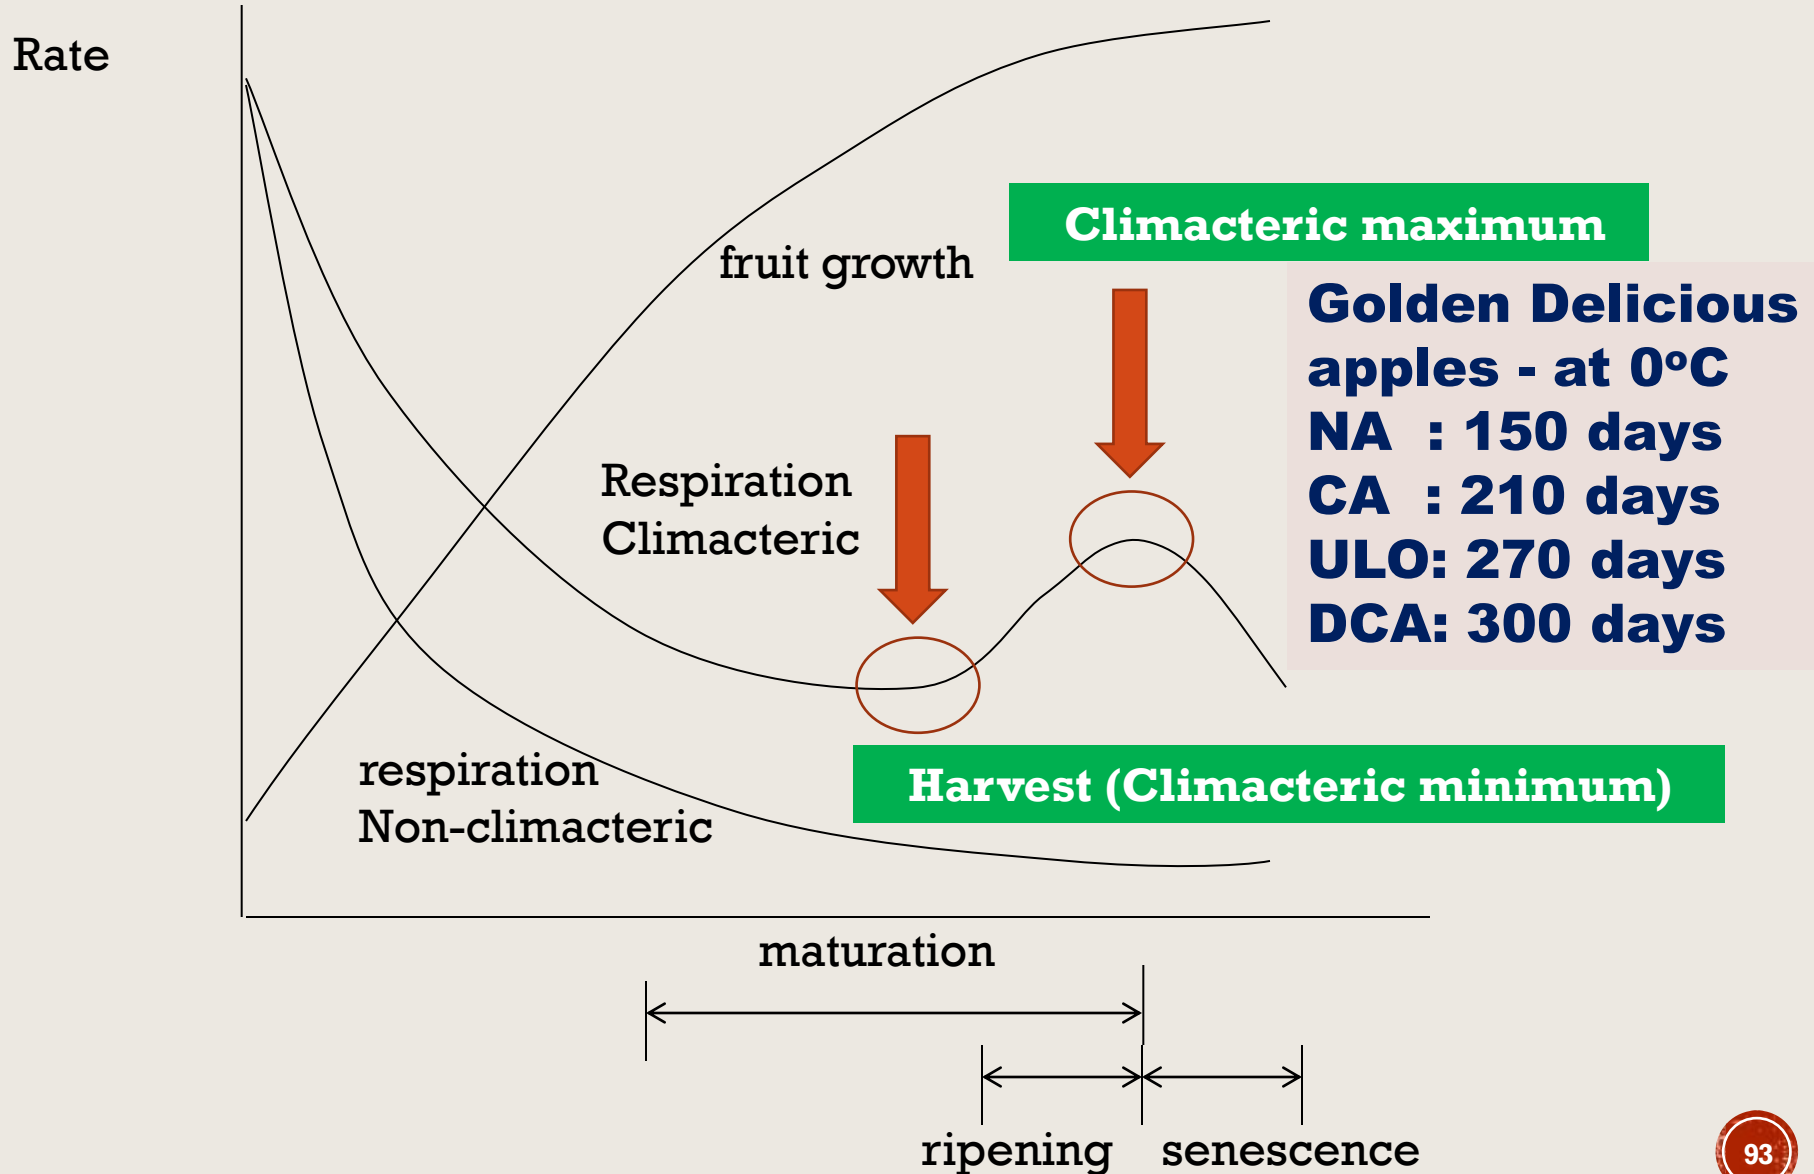

# The advantages of CA storage

- **Reduce:** - metabolic activity and oxidation,  
- respiration rate and ethylene production,
- **Control:** - ripening and senescence,  
- loss of acidity, sugars, vitamins, firmness  
- degradation of chlorophyll,  
- physiological disorders,  
- decay and insects,
- **Maintain quality and extends storage life,**
- **Longer shelf life.**

# WHY CA STORAGE?

# Respiration and O<sub>2</sub> relation

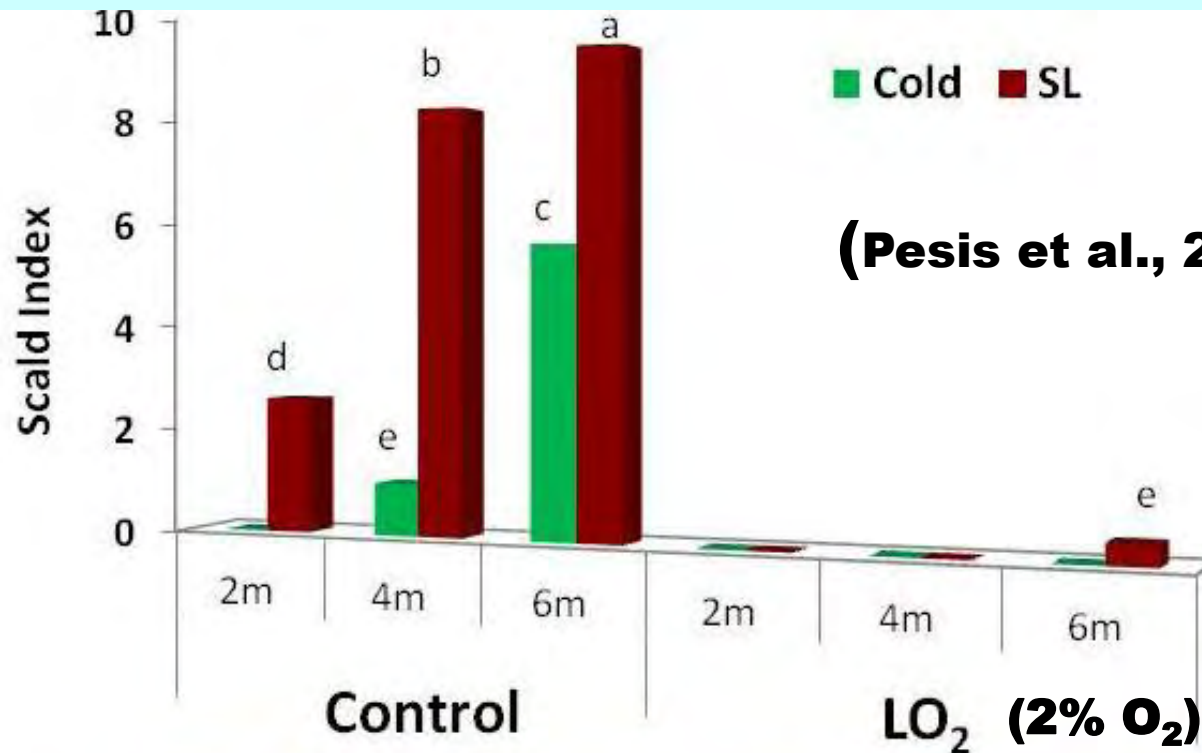

**If O<sub>2</sub> level is too low, anaerobic respiration occurs**

# CONTROLLING BROWNING BY LOW O<sub>2</sub>

# Superficial Scald Control – Granny Smith apples at 0°C for 6 months + 7 d at 20°C

# DECAY CONTROL

**CA stored  
(3% O<sub>2</sub> + 15% CO<sub>2</sub>)**

**5 months  
at 6°C**

**Air stored**

# Reducing CI of Avocado with CA

**2% O<sub>2</sub> + 2.5% CO<sub>2</sub>**

**Air (Control)**

**<0.01ppm Ethylene**

**+ 0.1ppm Ethylene**

**'Hass' Avocado  
9 weeks at 5°C +  
5 days at 20°C**

**+ 1ppm Ethylene**

**+ 10ppm Ethylene**

# Six Months Storage of Bartlett Pears

# CA EQUIPMENTS

# Types of CA Storage

- **Conventional CA Storage (2 - 10% O<sub>2</sub>)**
- **Rapid CA (Establish in 1 to 3 days instead of 20-30 days)**
- **Ultra low O<sub>2</sub> (ULO) (1% O<sub>2</sub>)**
- **Sequential CA (2 weeks 0.5% O<sub>2</sub>, then 2% O<sub>2</sub> thereafter)**
- **High CO<sub>2</sub> Storage (10 - 20% CO<sub>2</sub>)**
- **Dynamic CA (DCA) Storage (0.4 - 1% O<sub>2</sub>)**
- **Low ethylene CA Storage (< 1 µl L<sup>-1</sup> C<sub>2</sub>H<sub>4</sub>)**

# CA STORAGE ROOMS

- **Gas tight rooms and doors are prerequisite,**
- **Made from metal-faced sandwich panels,**
- **The joints between panels taped with gas tight tape or painted,**
- **Sealed CA rooms have pressure changes. Thus, pressure relief valve is prerequisite to solve this problem.**

# **GAS TIGHT DOOR FOR CA STORAGE AND CONTROLLING FRUIT**

**Sample fruit in the boxes must be placed behind the hatch (monitoring window).**

**Gas tight door  
and monitoring  
window**

**Control fruit**

# POTENTIAL HAZARDS OF CA STORAGE

- **Cause or aggravate some physiological disorders**
  - **Low O<sub>2</sub> injury**
  - **High CO<sub>2</sub> injury**
- **Cause irregular ripening**
  - **Appearance, aroma, flavor**
- **Induces off-flavors/odors**
  - **Anaerobic volatiles**
- **Increase decay susceptibility in some produce**

## **Tolerance to high CO<sub>2</sub> levels (Kader, 2003)**

<b>Max. CO<sub>2</sub> %</b>	<b>Commodities</b>
<b>2</b>	<b>Most Cvs. apples, apricot, pear, grape, tomato, lettuce, celery, artichoke</b>
<b>5</b>	<b>Peach, plum, orange, avocado, banana, kiwifruit, cauliflower</b>
<b>10</b>	<b>Grapefruit, lemon, lime, persimmon, pineapple, cucumber, asparagus, broccoli</b>
<b>15</b>	<b>Strawberry, cherry, cantaloupe, fig, pomegranate</b>

## **Tolerance to low O<sub>2</sub> levels (Kader, 2003)**

**Minimum O<sub>2</sub> %**

<b>&lt;1</b>	<b>Asparagus, broccoli, berries, fig, lettuce, melons, papaya, pineapple, strawberry, fresh-cut produce</b>

# ETHYLENE

## RIPENING HORMONE

Threshold = 0.1 to 10 ppm

# ETHYLENE - AN IMPORTANT FACTOR

- Useful:
  - Accelerates ripening
  - Causes abscission
- A problem:
  - Accelerates ripening
  - Accelerates senescence
  - Causes abscission

# CHARACTERISTICS OF ETHYLENE RESPONSES

- **Threshold concentration (0.1 ppm)**
- **Plateau concentration (10 ppm)**
- **Associated respiration rise**
- **Temperature optimum (15 – 25°C)**
- **CO<sub>2</sub> (>1%) inhibits**

# **INHIBITION OF ETHYLENE ACTION**

- **Controlled and modified atmospheres**
  - **Low oxygen, high CO<sub>2</sub> inhibit production, action**
- **Silver thiosulfate**
  - **Registered for cut flowers**
- **1-MCP (SmartFresh™)**

# Storage Systems

(Streif, 2008)

# **10 critical point for quality maintenance**

- 1) Harvesting at optimal maturity,**
- 2) Minimizing mechanical injury at harvest,**
- 3) Do not leave the product under direct sun after harvest,**
- 4) Transportation of products from orchard to packinghouse asap,**
- 5) Immediate cold chain management after harvest ,**
- 6) Using appropriate technology during packaging,**
- 7) Maximum care during handling and packaging,**
- 8) Using appropriate packaging for the product,**
- 9) Using appropriate transportation technology,**
- 10) Teaching employers.**

**THANK YOU  
FOR YOUR ATTENTION**
